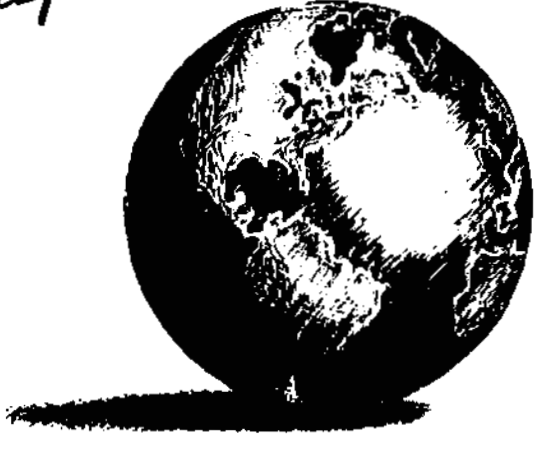
HANDLE WITH Responsible CARE



170 leading companies are saying "We're responsible."

It's no secret that alot of people are unhappy with chemical companies.

This despite the fact that chemicals have become necessities of modern living. In fact, it's estimated that over 60% of today's products could not be manufactured without chemicals.

Today, there are hundreds of chemical manufacturers in the United States, and thousands of chemical products that help your family enjoy the benefits of progress.

Still, the quality of your life is measured by more than progress. You have a right to expect the highest possible standards of operation from such an important industry.

That's why the member companies of the Chemical Manufacturers Association have joined together in establishing the guiding principles of the Responsible Care Initiative:

- **To recognize and respond to community concerns about chemicals and our operations.**
- **To develop and produce chemicals that can be manufactured, transported, used and disposed of safely.**
- **To make health, safety and environmental considerations a priority in our planning for all existing and new products and processes.**
- **To report promptly to officials, employees, customers and the public, information on chemical-related health and environmental hazards and to recommend protective measures.**
- **To counsel customers on the safe use, transportation and disposal of chemical products.**
- **To operate our plants and facilities in a manner that protects the environment and the health and safety of our employees and the public.**
- **To extend knowledge by conducting or supporting research on health, safety and environmental effects of our products, processes and waste materials.**
- **To work with others to resolve problems created by past handling and disposal of hazardous substances.**
- **To participate with government and others in creating responsible laws, regulations and standards to safeguard the community, workplace and environment.**
- **To promote the principles and practices of Responsible Care by sharing experiences and offering assistance to others who produce, handle, use, transport or dispose of chemicals.**

The CMA has already been a prime mover in implementing Title III — your Right To Know about what chemicals are being produced and used in your neighborhood. Now, we're committing our resources to do more.

If you live near a chemical company, work with them to be an active participant in Responsible Care.

The world is a fragile place. The problems are big. We all have to work together to protect it.

For a free brochure with more information on the Responsible Care Initiative, write today: CMA Responsible Care, Dept. 001, Box 7777, Washington, DC 00000.

WE'RE COMMITTED TO RESPONSIBLE CARE

Today, the future is in our hands. The legacy we leave for the next generation depends on our actions, not our words.

The member companies of the Chemical Manufacturers Association have joined together to establish a code for actions designed to protect the present and the future for the communities we serve.

Each of the 170 CMA members has committed to these guiding principles of the Responsible Care Initiative:

- To recognize and respond to community concerns about chemicals and our operations.
- To develop and produce chemicals that can be manufactured, transported, used and disposed of safely.
- To make health, safety and environmental considerations a priority in our planning for all existing and new products and processes.
- To report promptly to officials, employees, customers and the public, information on chemical-related health and environmental hazards and to recommend protective measures.
- To counsel customers on the safe use, transportation and disposal of chemical products.
- To operate our plants and facilities in a manner that protects the environment and the health and safety of our employees and the public.
- To extend knowledge by conducting or supporting research on health, safety and environmental effects of our products, processes and waste materials.
- To work with others to resolve problems created by past handling and disposal of hazardous substances.
- To participate with government and others in creating responsible laws, regulations and standards to safeguard the community, workplace and environment.
- To promote the principles and practices of Responsible Care by sharing experiences and offering assistance to others who produce, handle, use, transport or dispose of chemicals.

Responsible Care will mandate specific codes of practice for emissions, transportation of chemicals, emergency planning, and other key issues.

Actions will decide the future. If you live near a chemical company, work with them or be an active participant in Responsible Care.

We know you're concerned. You have a right to expect high standards from our industry. We're committed to do more to protect the future we share.

Responsible Care: a CMA commitment:

1.
To recognize and respond to community concerns about chemicals and our operations.

2.
To develop and produce chemicals that can be manufactured, transported, used and disposed of safely.

3.
To make health, safety and environmental considerations a priority in our planning for all existing and new products and processes.

4.
To report promptly to officials, employees, customers and the public, information on chemical-related health and environmental hazards and to recommend protective measures.

5.
To counsel customers on the safe use, transportation and disposal of chemical products.

6.
To operate our plants and facilities in a manner that protects the environment and the health and safety of our employees and the public.

7.
To extend knowledge by conducting or supporting research on health, safety and environmental effects of our products, processes and waste materials.

8.
To work with others to resolve problems created by past handling and disposal of hazardous substances.

9.
To participate with government and others in creating responsible laws, regulations and standards to safeguard the community, workplace and environment.

10.
To promote the principles and practices of Responsible Care by sharing experiences and offering assistance to others who produce, handle, use, transport or dispose of chemicals.

Responsible Care: a CMA commitment:

We're training over 1,000,000 environmentalists.

The world is a fragile place. Protecting it is a concern for us all.

That's why the 170 member companies of the Chemical Manufacturers Association have joined together in establishing the 10 guiding principles of the Responsible Care Initiative.

Through Responsible Care, we are committing our resources to major programs in the service of health, safety and the environment.

But our biggest resource is people. We're educating and training more than a million workers in the proper measures for handling and disposing of hazardous materials safely and responsibly.

Our people are growing as environmentalists, using their knowledge and energy for the good of the community.

The CMA has already been a prime mover in implementing Title III — your Right to Know about what chemicals are being produced and used in your neighborhood.

Now, through Responsible Care, we are joining our people in doing more to address the concerns of our communities.

Chemicals have become an indispensable part of our daily lives. Through Responsible Care, our commitment is to produce and use them responsibly.

For a free brochure with more information on the Responsible Care Initiative, write today: CMA Responsible Care, Dept. 001, Box 7777, Washington, DC 20000.

TEN GOOD REASONS TO KEEP AN EYE ON YOUR LOCAL CHEMICAL COMPANY

Responsible Care: a CMA commitment

1.
To recognize and respond to community concerns about chemicals and our operations.

2.
To develop and produce chemicals that can be manufactured, transported, used and disposed of safely.

3.
To make health, safety and environmental considerations a priority in our planning for all existing and new products and processes.

4.
To report promptly to officials, employees, customers and the public, information on chemical-related health and environmental hazards and to recommend protective measures.

5.
To counsel customers on the safe use, transportation and disposal of chemical products.

6.
To operate our plants and facilities in a manner that protects the environment and the health and safety of our employees and the public.

7.
To extend knowledge by conducting or supporting research on health, safety and environmental effects of our products, processes and waste materials.

8.
To work with others to resolve problems created by past handling and disposal of hazardous substances.

9.
To participate with government and others in creating responsible laws, regulations and standards to safeguard the community, workplace and environment.

10.
To promote the principles and practices of Responsible Care by sharing experiences and offering assistance to others who produce, handle, use, transport or dispose of chemicals.

Not everyone has been pleased to have a chemical company as a neighbor.

You've told us that, and we're working hard to change that perception. We agree that you have a right to expect high standards of operation.

That's why the more than 170 member companies of the Chemical Manufacturers Association have joined together in establishing the 10 guiding principles of the Responsible Care Initiative.

Responsible Care will mandate specific codes of practice for emissions, transportation of chemicals, emergency planning, and other key issues.

Responsible Care is our way of making sure that we're not part of the problem, but part of the solution.

The CMA has already been a prime mover in implementing Title III — your Right To Know about what chemicals are being produced and used in your neighborhood. Now, we're committing our resources to do more.

If you live near a chemical company, work with them to be an active participant in Responsible Care.

By all means, keep an eye on us. After all, good neighbors watch out for each other.
